SUBMISSION OF ENGLISH TRANSLATION OF INTERNATIONAL PRELIMINARY REPORT

Commissioner for Patents Customer Service Window Randolph Building 401 Dulany Street Alexandria, VA 22314

Sir:

Applicants submit herewith a copy of the English translation of the International Preliminary Report issued for the basic PCT application (PCT/JP2005/005515) of the above-referenced application.

Respectfully submitted,

FITCH, EVEN, TABIN & FLANNERY

Date: December 12, 2006

Kendrew H. Colton Registration No. 30,368

PATENT COOPERATION TREATY

PCT

NOTIFICATION OF TRANSMITTAL
OF COPIES OF TRANSLATION
OF THE INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY
(CHAPTER I OR CHAPTER II
OF THE PATENT COOPERATION TREATY)

(PCT Rules 44bis.3(c) and 72.2)

From the INTERNATIONAL BUREAU

To:

IDE, Masatake M. IDE & CO. 9F, Gobancho Grand Bldg. 3-1, Gobancho Chiyoda-ku Tokyo, 1020076 JAPON

Date of mailing (day/month/year) 26 October 2006 (26.10.2006)	
Applicant's or agent's file reference IFP-711	IMPORTANT NOTIFICATION
International application No. PCT/JP2005/005515	International filing date (day/month/year) 25 March 2005 (25.03.2005)
Applicant Techno Polym	ner Co., Ltd. et al

 Transmittal of the 	e translation	to th	e applicant.
--	---------------	-------	--------------

V	The International Bureau transmits herewith a copy of the English translation of the international preliminary report or
ك	patentability (Chapter I).

The International Bureau transmits herewith a copy of the English translation of the international preliminary report on patentability (Chapter II).

2. Transmittal of the copy of the translation to the designated or elected Offices.

The International Bureau notifies the applicant that copies of that translation have been transmitted to the following designated or elected Offices requiring such translation:

None

The following designated or elected Offices, having waived the requirement for such a transmittal at this time, will receive copies of that translation from the International Bureau only upon their request:

AE, AG, AL, AM, AP, AT, AU, AZ, BA, BB, BG, BR, BW, BY, BZ, CA, CH, CN, CO, CR, CU, CZ, DE, DK, DM, DZ, EA, EC, EE, EG, EP, ES, FI, GB, GD, GE, GH, GM, HR, HU, ID, IL, IN, IS, KE, KG, KP, KR, KZ, LC, LK, LR, LS, LT, LU, LV, MA, MD, MG, MK, MN, MW, MX, MZ, NA, NI, NO, NZ, OA, OM, PG, PH, PL, PT, RO, RU, SC, SD, SE, SG, SK, SL, SM, SY, TJ, TM, TN, TR, TT, TZ, UA, UG, US, UZ, VC, VN, YU, ZA, ZM, ZW

3. Reminder regarding translation into (one of) the official language(s) of the elected Office(s).

The applicant is reminded that, where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary report on patentability (Chapter II).

It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned within the applicable time limit (Rule 74.1). See Volume II of the PCT Applicant's Guide for further details.

PATENT COOPERATION TREATY

PCT

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (Chapter I of the Patent Cooperation Treaty)

(PCT Rule 44bis)

Applicant's or agent's file reference IFP-711	FOR FURTHER ACTION	See item 4 below		
International application No. PCT/JP2005/005515	International filing date (day/month/year) 25 March 2005 (25.03.2005)	Priority date (day/month/year) 31 March 2004 (31.03.2004)		
International Patent Classification (8th edition unless older edition indicated) See relevant information in Form PCT/ISA/237				
Applicant Techno Polymer Co., Ltd.				

1.	This international preliminary re International Searching Authority	port on patentability (Chapter I) is issued by the International Bureau on behalf of the y under Rule 44 bis.1(a).
2.	This REPORT consists of a total	of 8 sheets, including this cover sheet.
		nce to the written opinion of the International Searching Authority should be read as a reference eport on patentability (Chapter I) instead.
3.	This report contains indications r	relating to the following items:
	Box No. I	Basis of the report
	Box No. II	Priority
	Box No. III	Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
	Box No. IV	Lack of unity of invention
	Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
	Box No. VI	Certain documents cited
	Box No. VII	Certain defects in the international application
	Box No. VIII	Certain observations on the international application
4.		mmunicate this report to designated Offices in accordance with Rules 44bis.3(c) and 93bis.1 but nakes an express request under Article 23(2), before the expiration of 30 months from the priority

	Date of issuance of this report 19 October 2006 (19.10.2006)

Box	No. I	Basis of this opinion
1.		regard to the language, this opinion has been established on the basis of the international application in the language in which it was unless otherwise indicated under this item.
		This opinion has been established on the basis of a translation from the original language into the following language
	_	, which is the language of a translation furnished for the purposes of international search (under
		Rule 12.3 and 23.1(b)).
2.		regard to any nucleotide and/or amino acid sequence disclosed in the international application and necessary to the claimed ation, this opinion has been established on the basis of:
	a.	type of material
		a sequence listing
		table(s) related to the sequence listing
	b.	format of material
		in written format
		in computer readable form
	c.	time of filing/furnishing
		contained in the international application as filed.
		filed together with the international application in computer readable form.
		furnished subsequently to this Authority for the purposes of search.
3.		In addition, in the case that more than one version or copy of a sequence listing and/or table(s) relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.
4.	Addi	tional comments:

Box	No. I	V Lack of unity of invention
1.		In response to the invitation (Form PCT/ISA/206) to pay additional fees the applicant has:
		paid additional fees
		paid additional fees under protest
		not paid additional fees
2.	\boxtimes	This Authority found that the requirement of unity of invention is not complied with and chose not to invite the applicant to pay additional fees.
3.	This	Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is
		complied with
	\boxtimes	not complied with for the following reasons:
		Although the invention relating to claim 6 is an antistatic agent having no specific target for blending, the thermoplastic resin composition in claim 1 is the invention of a resin composition wherein no provision exists for this antistatic agent. Therefore, no clear common feature exists between the independent claims 1 and 6. In addition, the thermoplastic resin composition having a specified amount of outgas and the antistatic agent were not recognized as being closely linked by parties skilled at the time of filing the present application. Therefore, because there is no relationship among these groups of inventions involving common special technical features according to PCT Rule 13.2, they cannot be said to be a group of inventions so linked as to form a single general inventive concept.
4.	Cons	sequently, this opinion has been established in respect of the following parts of the international application:
		all parts the parts relating to claims Nos.
	_	THE PARTY COUNTING TO CHAIRING TAGE.

25 March 2004

Because claims 1 and 9 are disclosed in documents 1 and 2 cited in the ISR respectively, they do not appear to be novel. Documents 1 and 2 disclose a thermoplastic resin composition wherein the amount of outgas is controlled within a specified range, and describe a carrier for a semi-conductor device as an application.

Because claims 2 and 7 are described in document 1 cited in the ISR, they do not appear to be novel. Document 1 discloses controlling the surface resistivity of a molding to $1 \times 10^{11} \Omega$ by blending a specified amount of an antistatic agent in a thermoplastic resin composition.

Claim 3 does not appear to involve an inventive step based on documents 1, 2 and 4 cited in the ISR. Using a styrene resin such as ABS as a resin material to constitute a carrier for a semi-conductor is a commonly known technical matter in this technical field, as suggested in cited document 4 for example.

Claims 4-6 do not appear to involve an inventive step based on documents 1, 2, 3 and 4 cited in the ISR. Documents 3 and 4 disclose that a polyamide elastomer containing polyamide 12 segments and poly(alkylene oxide) glycol segments functions as an antistatic agent for a thermoplastic resin. Because the chemical structure of the elastomer in documents 3, 4 does not differ particularly from that of the elastomer in claims 4-6 of the present application, it is expected that its refractive index, melting point, viscosity and surface resistivity will also be either equal to those of the present application or of a level that could be easily employed by a party skilled in the art.

Box No. VIII

Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Claim 1 attempts to specify a thermoplastic resin composition by a target value to be achieved for the amount of outgas, but specifying a resin composition by the amount of outgas from unspecified materials, that is to say an amount having no direct relationship with the chemical constitution of a thermoplastic resin composition, is generally difficult. In addition, even looking at the description in the specification, it is not found that a general manufacturing method able to regulate the amount of outgas within a specified range for an unspecified resin composition is sufficiently disclosed. Furthermore, because the features of claims 2-9 are not directly related to the amount of outgas, it is not intended to specify the chemical constitution of a resin composition from the perspective of the amount of outgas. Therefore, it cannot be said that the inventions of claims 1-9 are clearly constituted or adequately supported by the specification.
